

CLEVELAND STEEL CONTAINER CORPORATION

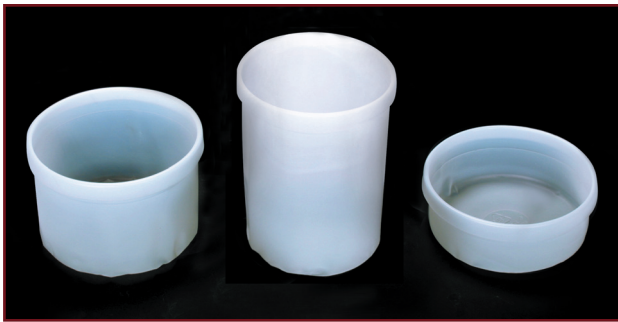

Steel Pail Insert System™

Cleveland Steel Container is proud to introduce a unique line of UN rated steel pails. They are specifically designed to accept a plastic tray or liner for use as a single integrated package. This innovative package combines the strength and reliability of a steel pail designed to hold either a one or two part product.

Different size plastic inserts are available depending on the mixing ratio and volume of product being packaged. When the plastic tray is used, the configuration of the steel pail will hold a two component product in one UN rated steel pail. Simply fill the steel pail with the contents of part A, then insert the plastic tray into the pail and add the contents of part B. The contents of part B can either be placed directly into the tray as a free flowing material or contained in a smaller package and then placed into the tray. Finally, place a specially designed steel cover on the pail and close with a pneumatic crimper. Once the end

user receives the pail, they remove the cover and combine the contents of A and B and apply according to instructions. Customers will appreciate the convenience and ease of this package. We also offer UN rated steel pails that can be used with a plastic liner. The combination of the steel pail and full plastic liner makes this an ideal package when dealing with concerns such as product contamination, environmental issues and product compatibility.

The trays, liners and steel pails are available in a variety of sizes and styles to fit all your packaging needs. These products are available exclusively through Cleveland Steel Container and approved distributors. The plastic liners and trays were developed in conjunction with CDF Corporation, a leading manufacturer of inserts and liners for pails and drums. CDF is the exclusive supplier to Cleveland Steel Container. For additional information regarding these products, please call any Cleveland Steel Container location listed below.

Features and Specifications of the Steel Pail Insert System Includes...

- UN rating with tray is 1A2/Y1.6/50
- UN rating with a full liner is 1A2/Y1.8/100
