## Lever Locking Ring Seal System™

Cleveland Steel Container is proud to introduce a unique cover seal system designed for packaging a wide range of products that require an easy opening and re-sealing cover. There are three specially designed lever locking rings matched with a high performance ring seal cover that provides superior performance, and will protect and differentiate your products.

To use this system, simply fill the pail, place the specially designed cover on top of the pail and then place the appropriate lever locking ring over the cover. Once the ring is in place, snap the ring to the closed position. Once the handle is secure, two choices of safety clips will secure the handle from unwanted opening.

There are three different ring designs. The first ring is designed to be used when packaging hazardous liquid materials. The combination of a UN ring and a UN ring seal cover, combined with strong 24 gauge steel, achieves an industry first UN rating approved for shipping hazardous liquids.

The second ring is designed to be used when packaging hazardous solid materials. A wide range of packaging options are available to provide the most cost effective package based on the packaging group and weight of the product.

The third ring is designed to be used when packaging any non-hazardous product. An ideal choice for any product that would benefit from the easy sealing and opening cover to having the ability to easily re-seal the cover.

One of the biggest benefits of using this cover sealing system is that it does not require an opening tool to open the cover. Simply remove the safety clip and move the handle to the open position. The product is now ready to use.

Another great benefit of this ring sealing system is that it can be re-sealed after the initial use. Simply place the cover back on top of the pail, slip the lever locking ring over the cover and move the handle to the close position. The pail is now resealed and ready for storage. Unfortunately, due to UN shipping regulations, the pail can not be re-shipped after initial opening.

The ring seal system is available exclusively through Cleveland Steel Container and approved distributors. The cover sealing system was developed in conjunction with the Rieke Corporation, a leading manufacturer of closures and lever locking rings for the pail and drum industry.

### Features and Specifications of the Lever Locking Ring Seal System Includes...

- Three different rings provide the ability to package UN liquids, UN solids and all non-regulated products
- For use on open-head pails in 3.5 & 5 gallon size
- Offers an easy opening cover, no additional opening tool required
- Reduce product spoilage with the ability to re-seal the pail
- A head press is available to help automate the closing of the ring seal system
- Achieves a UN rating of 1A2/Y1.8/100 when used with the appropriate gasket and 24 gauge steel
- A metal locking clip or a plastic tamper evident seal is required to properly secure handle
- Order complete package from Cleveland Steel Container
