

CLEVELAND STEEL CONTAINER CORPORATION

PRESENTS THE UNiPak™

The UNiPak™ System by Cleveland Steel Container allows packagers the ability to ship two separate products in one UN-rated container. An ideal packaging choice for coatings and other products in which a catalyst must be segregated from the base product until mixing prior to application.

The UNiPak™ System includes a specially-designed steel cover with an interior plastic cradle capable of holding tin cans or other packaging choices. Part A is filled into the base of the steel pail while Part B is filled into a tin can and placed in the cradle. A steel cover is then crimped over the top of the pail and the package is sealed in compliance with special UN closing instructions.

Cleveland Steel Container is proud to have developed this unique, patent-pending product, the first of its kind able to achieve a coveted UN certification as a single package, though comprised of more than one container.

The UNiPak™ System is available exclusively through Cleveland Steel Container Corporation, a leading manufacturer of steel pails serving a diverse range of packaging needs for customers throughout North America. The UNiPak™ System was developed in conjunction with CDF Corporation, a leading manufacturer of inserts and liners for pails and drums. CDF is the exclusive supplier to Cleveland Steel Container of the plastic cradle used as part of the UNiPak™ System.

FEATURES AND SPECIFICATIONS OF THE UNiPak™ SYSTEM INCLUDE:

- The strength and reliability of a steel pail.
- UN-approved for shipping Packaging Group II and III materials.
- UN ratings available: 1A2/Y1.6/50 or 1A2/Z2.5/50.
